

Sketch 1: IT Worker

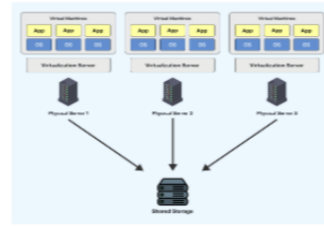

Take stock of old machines and software

Back up old data

Develop APIs to bridge software gap between old and new machines

Create virtual machines to access older software on newer machines

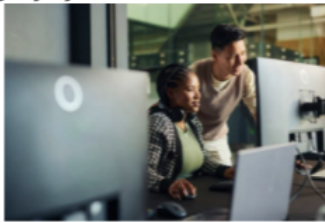

Sketch 2: Common Employee

Participate in employee training on legacy systems and software

Use new and old systems in tandem, not relying on one over the other

Cooperate with IT to determine best and safest measures for you to integrate

Partake in company programs and incentives to learn more and promote integration

Sketch 3: Corporate Executive

Work with and contract API developers to establish technical framework

Create a budget to allocate company funds for legacy integration

Work with HR and IT to develop a plan to get employees on board with integration

Weigh the benefits and risks of legacy integration
